# Data services on the frame of the BlueNetCat network

Transferring and Capitalisation Event for Spain and Portugal

Gerard Llorach

5th July 2022

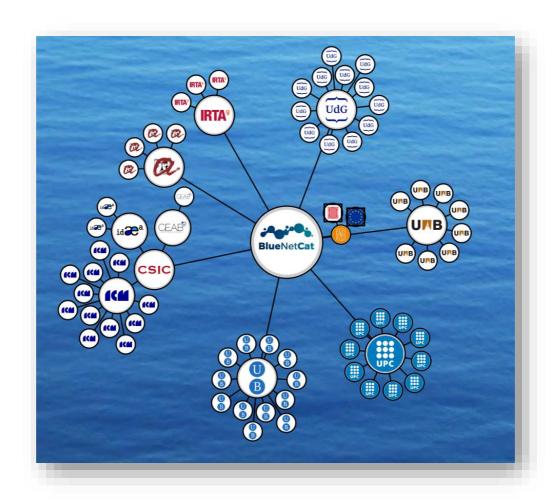

### BlueNetCat

Xarxa Marítima de Catalunya

64 research groups – 7 institutions – around 590 members

### Data services

Capitalize data collected by the researchers through web visualizations and web services.

https://github.com/BlueNetCat/info

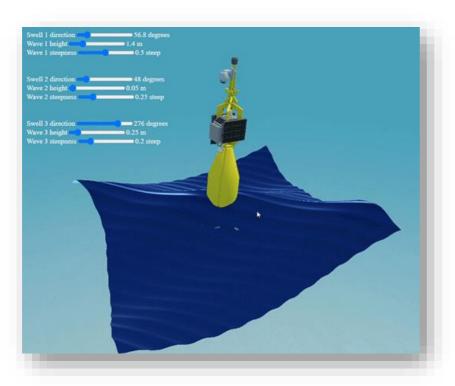

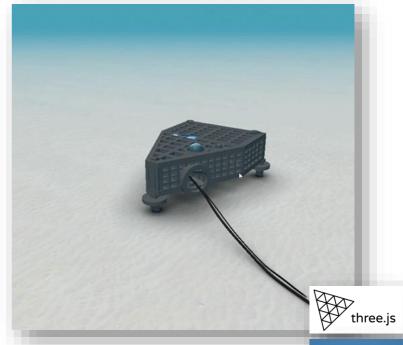

### Data services

Acrònim	Títol	Objective	Estat
MARCAT	Confidencial	Confidencial	K
VISAP	Servei d'Assessorament Pesquer	Visualization of fishing surveys for fisheries management	X
OBSEA Data	OBSEA data	3D web application to show the data collected by the underwater observatory	
QualiCat	Qualitat d'aigües costaneres	Visualization of water quality surveys	
GeneticaMED	Genètica al Mediterrani	Visualization of genetics of marine populations (population genomics)	
MarineHeatWave sMED	Onades de calor al Mediterrani	Web application to track and visualize marine heat waves	•
CLIMACAT	Clima Marítim de Catalunya	Visualize climatological data	

### **OBSEA** Data

Advanced visualization of the data collected by the underwater station (in development).

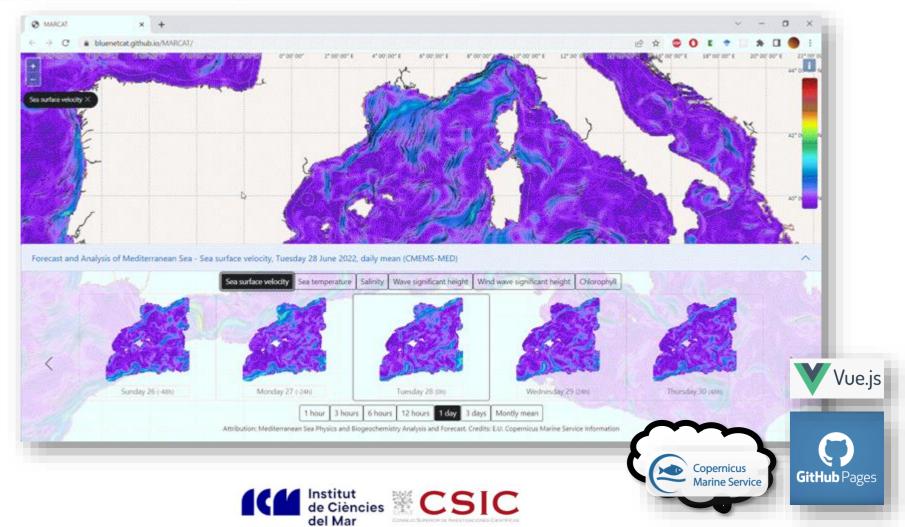

### **MARCAT**

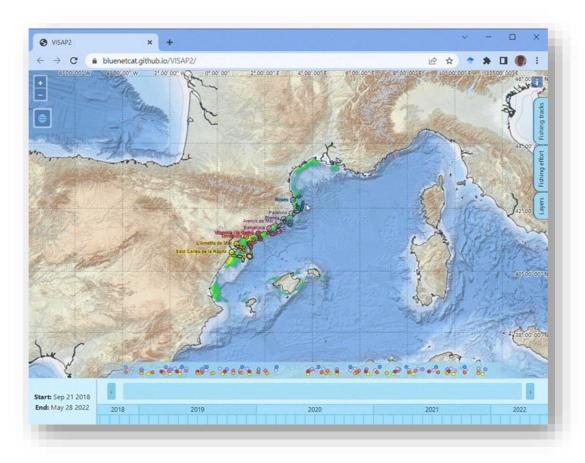

Operational Oceanographic visualization of the Catalan Sea

https://bluenetcat.github.io/MARCAT/

#### Visualization of fishing surveys for fisheries management

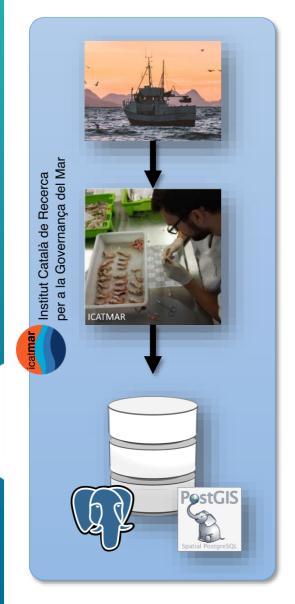

https://bluenetcat.github.io/VISAP2/

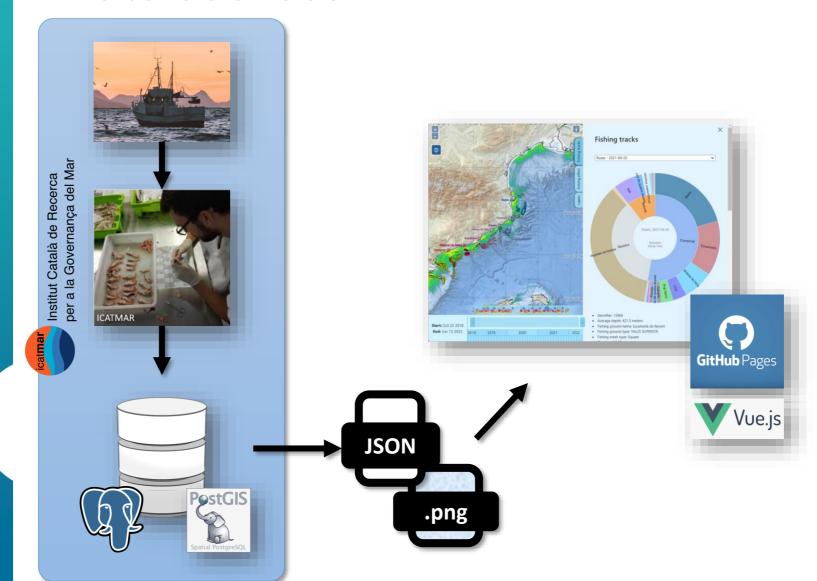

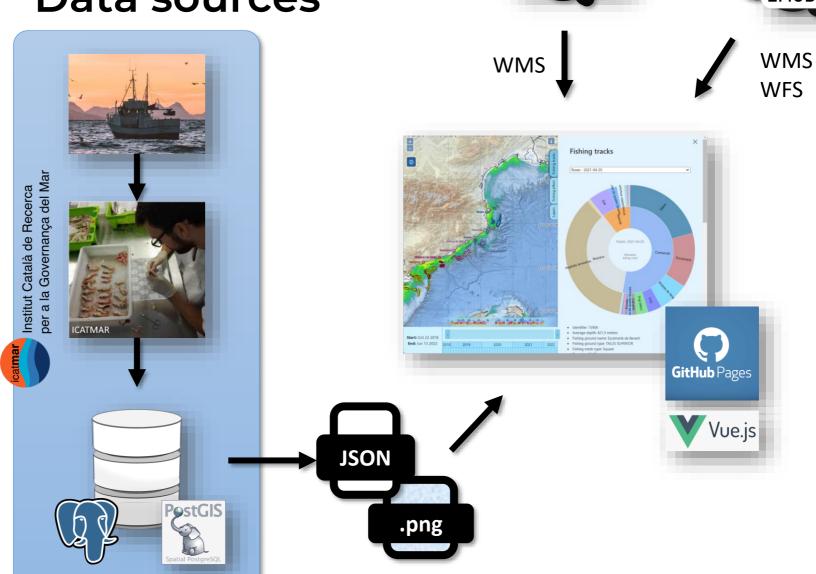

#### **Data sources**

#### **Data sources**

#### **Data sources**

Copernicus Marine Service

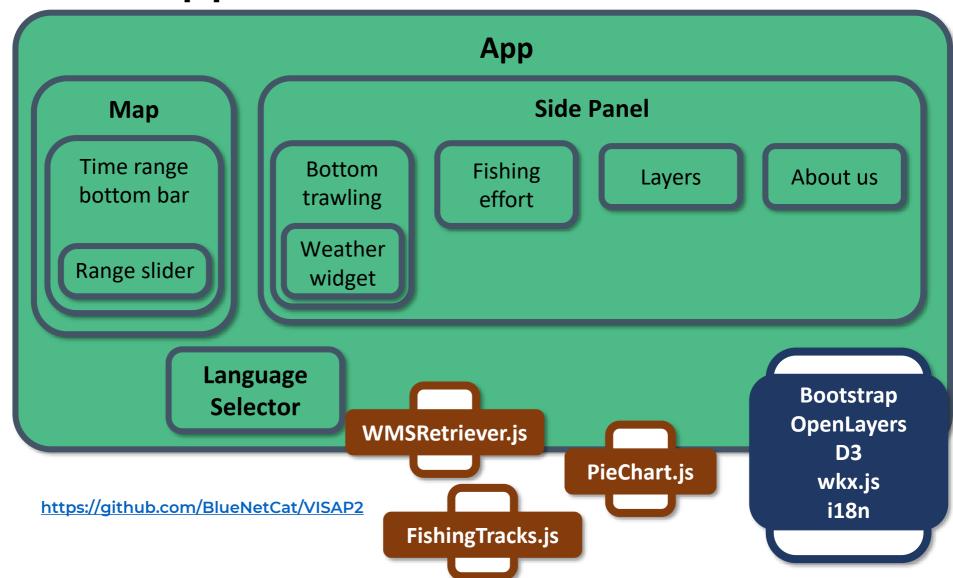

### CounterExample.vue

```
<template>
                                                                 HTML
 <button @click="count++">Count is: {{ count }}</button>
</template>
<script>
export default {
  data() {
    return {
                       JS
      count: 0
                                                       PREVIEW
                                                                 JS
                                                                      CSS
                                                                             SSR
                                                       Count is: 0
</script>
<style scoped>
button {
                             CSS
  font-weight: bold;
</style>
```

### Web application structure

#### State of the art novelties

- Visualization of geolocalized bottom trawling surveys.
- Additional layers such as temperature, salinity, chlorophyll, and meterology of the previous days.

#### **Future steps**

Seine fishing, small-scale fisheries, size charts, biological metrics.

#### **Related platforms**

https://globalfishingwatch.org/map/

## Summary

#### **Data services**

- Provides the extra step for scientists to showcase their data.
- Specialized technical service for data visualization, which is usually not available in a research group.
- Because the service is dedicated to all research groups of BlueNetCat, components and data can be shared between applications.
- Promotes data sharing!! Scientists are attracted by the possibility of visualizing and capitalizing their data.
- Open source: <a href="https://github.com/BlueNetCat/">https://github.com/BlueNetCat/</a>

This project has be funded by the Generalitat de Catalunya and by the European Regional Development Fund (ERDF).
